Most people/sapes think that there thinking is just fine. They may not be Einsteins but they're quite satisfied that they "know what's real".

Most people think they have developed / ken developing their mind

Most people express political, cultural, economic/etc opinions as though they are experts and really know....

But Most people are wrong

Most people live in self-delusion and fantasy

Developing the ear/hand entails real interactions that leave a wake - a tape - an ability to improvise on ~~piano~~ keyboard - a body of "work/play" study bears fruit - if it is persued.

frankly, we met most resistance from the academic community.

I know that many of my idea/theories are perceived as unusual and/or even threatening

One of the products of my obsession with langage/linguistics/etc. was a ~~system~~ notation system I used to ~~teach~~ help ~~students~~ asian learners to acquire the neuro muscular/ear/mouth skills need to speak english with ~~little~~ minimal accent.

Only gradually, over the past several years has it dawned on me that with minor modifications FONO would be an ideal tool to teach reading

11,016

the one trait children possess in spades.
is logic.
in an absence of data, logic is the
best tool we have.
They say "foot-foots"
"make maked"

old writing system is poorly designed
and stupid.
that's not a very technical term but
it does convey the appropriate
amount of contempt for subjecting
essentially intelligent, logical
children to such a system.

Anyone who can write/read english
easily (including myself) is
brain-damaged in a very subtle-
physical way

11,077

we have hard-wired into our brains a complimentary template to a needlessly complex and stupid system.

You can't really appreciate the scope of alpha's dumbness until after you have seen a reasonable system.

FONNGRAFIKS is a training alphabet. actually,
a sound symbol matrix.

Most people who have trouble learning to read never really "get" the idea that visual symbols stand for specific sounds.

The reason for this is that the alphabet is "stupid"

6. liberation from belief in verbal formulas

1/1/23 ~~12/23~~

As long as you believe/assume that you are a human being and that "you" can acquire a thing called enlightenment —

"You" will never get it

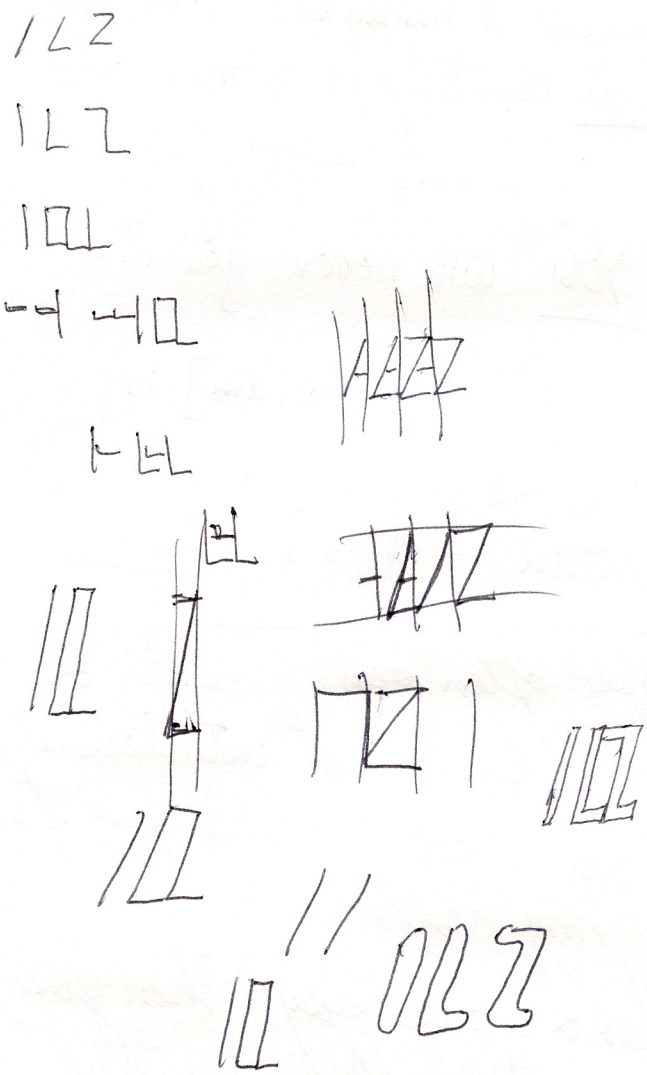

(Your idea) of [who I am] is impotent — can't produce action — it is not a doer.

People often say, "Well, I understand it intellectually, but I don't really feel it in my heart."

Then I would say, "Then you don't really understand it intellectually — quit fooling yourself — you're not a master of the realm of intellect

☆ The instant you get it and then think you *really* understand how *it is*.

You've lost it.

☆ There are really 2 realities or domains of existence

imagine a situation

- you see you've "friend", whom you haven't seen in several weeks. ~~He~~ He
- he's in a wheel chair
- Both legs are amputated above the knee.
- He with a business client
- The three of you are waiting to be seated
- you expect about a five minute wait
- you talk pleasantly about yourself, etc but never mention, "What happened?"
- you part company
- ? Are you "dying to know" what happened

?, does "knowing what happening" actually make any important difference

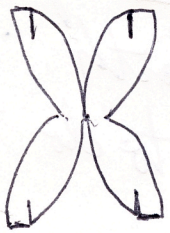

- it may be an interesting story, but aside from gossip value or bonding value

(both of which are valuable) 11,151

in many arenas/domain, "how you got here" is irrelevant.

- what's important is that you are here, now, in a wheel chair, healthy, sociable,

Our Civilizations-sapes- would have you believe that one of these mappings is the <u>really real true mapping</u> and that all experience must ultimately conform to that map.

11,152

- if you're not willing to pay for gendo, you're not convinced it will really make any difference in your life,
OR

↳ the point is, IT won't make any difference in your life. You can use IT to make a difference in your life — in the life of Earth. If you choose to do that

IT can't do it.
Only YOU can do that

11, 153

- i don't like to be arround scared people.
- i prefer "confident" ones.
- BUT, most non-scared people actually believe their maps are THE territory

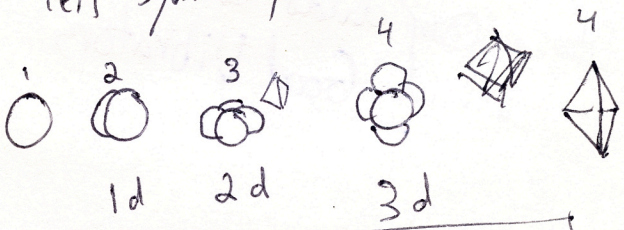

? can we become "confident" — at least un-scared — without <u>any</u> beliefs

Actually - it's not necessary to be without beliefs
It's about <u>not clinging</u> to beliefs

- They're often unconscious.
- Friends can point them out to us so we can't realize ~~and~~ their map-nature and eliminate them.

A guitar only an amoeba could love

Forget acoustic versus electric: Now, guitarists can add microscopic to their options. Scientists at Cornell University's nanofabrication facility have carved a tiny, six-stringed guitar out of silicon. The guitar was made just for fun to demonstrate a new technology for fabricating microelectromechanical devices (SN: 7/26/97, p. 62). Anyone attempting to play "Stairway to Heaven" on the instrument would have to pluck the strings—each about 100 atoms wide—with the tip of an atomic force microscope.

Intolerance is the cause of all evil in Earth.
Kill all intolerant people!

? How do you determine if a person is capable of acting consciously

! Assume they're not

? Can a person actually give up all beliefs

Probably not — at least not immediately

It's an attitude of desire to be rid of beliefs that is effective

148 moons ago, I began
making a a True lunar
calendar for myself because,
as I later came to discover/create,
it is part of my project to reevaluate
and restructure ~~the~~ human
symbol systems
time – calendar alphabet
clock
arithmatic notation
music notation
piano keyboard

11,361

I had studied drafting ~~in~~ during high school years.
so I could draw cleanly + precisely
the first calendars were designed
to fit my 8½" × 3½" 3-ringed
office/self-management system

By early 84 I had aquired a
macintosh computer and
by '85 had a 300dpi laserwriter

Evolution of the calendar

lately the printing technology has
matured to the point that I
can produce a product that
I'm not embarrassed of.

I'm looking for collaborators for
future editions. Artists/
designers with ideas - please
contact me.

11,362

Recently with improved printers and the explosion of the internet a situation has developed in which I can make this calendar available to as few or as many as desire them.

For a long time I have thought, "I can't be the only person in Earth who'd really like a true lunar calendar."

Well now we'll find out. If there are only ten of us, then I'll be happy to supply you with the calendar.

11,363

I will continue to make them for as far as I can see forward. I have no intention to stop making them -

I currently have calendars thru year 15 (2000 os)

If you want ever more information send email to evelmore@net???

first, a couple notes in general

- i almost never use the ravens font except is special fancy forms occasionally
- i do think it is far superior a system for children would be to read
- but i, as a brain-damaged adult (as a result of having had the alphabet imprinted on my nervous system as a young age) i find it difficult ~~to be able to~~ to read fluenently
- i suppose i could actually master it, but it would probably take a considerable commitment of time.
- and i'm unwilling to do that
- besides, it's the relationships between the grafs in the matrix that gives the system it's power... not the shape of ~~them~~ the symbols
- reading fono is an altered state of cons.
- it is literally listening with your eyes.
- it's actually a quite odd experience when you first begin to "read" it well
- ~~you~~ it requires a more passive listening attitude.

. on the matter of formatting/punctuation/etc.
. i don't remember, now, exactly what it i send you.
. one of my hand outs does have centered text
but that was a stylistic consideration.
. for scientific writing, the format is like this
email message... flush left
. every utterance begins a new line and if its a
long thought, the subsequent lines are
reverse indented.
. punctuation preceeds the utterances
? you shouldn't have to wait until the end of an
extremely long, intricate, and ultimately
not very interested sentence, to discover
that it's a question and not a statement,
should you

. it ~~diff~~ doesn't make ~~anything~~ typesetting more difficult.
. it does make publishing on paper
more expensive because more
paper is required for the same
number of keystrokes
. it's a small price to ~~pay~~ for increased
clarity of thought

- word spacing
- fono was designed to be a visual counterpart to actual spoken english.
- we write "I am going to go to the store."

or I'm gonna go to the store.

AYMGƎNNGODNƟNSDOR

~~aymgOn-god-6-sdor~~

~~(copy and paste into simple text and chang font to~~

- we write "I can go."

we say AYKNNGO

- some times its alright to break it up

RYD MAY LIPS

- but that sort of defeats its purpose.
- fono isn't meant to be scanned
- it's meant to be read. (RED)
- it's not necessarily a bad idea to slow down the reading process, especially if any real thinking is supposed to be taking place.

~~PRONOUNS~~ PROPER NOUNS

? how do you designate proper nouns when you talk.

11,380 GRAFS up in the numbers

- over the years, i've tried the seven new symbols in various keyboard locations.
- the present location seems to work ok for me.
- if you got a better idea, i'm all ears

- i've looked at shavian and i can't get past the vowels
- i can't make any sense of them
- i probably need someone who does understand them to sit down and explain it to me.

- there is a limit to the applicability of language
- in order to know that limit, you must venture beyond it
- in order to be understood (in language) it is necessary to limit one's self to the "thinkable" i.e. what the reader is capable of conceiving

---

- in writing persuasively to change someone's attitude/thinking/belief/etc, one must first avoid the ~~self~~-defense ego detectors
- it helps to stay at the lowest levels of abstraction possible
- keep it simple

earthling as esl

Criticism:
students won't understand much of what is being said.

Answer:
Yes, but most of what is being said is nonsense, bullshit, lies, etc.
it might be not-bad to not-understand it

in earthling, "be" may be used only with "not"

eventually, "not be" would wither away. Willy!

READING IS TWO SEPARATE SKILLS ACTIVITIES

ONE SIMPLE DISTINCTION

1. decoding
2. understanding

---

the failure to recognize this distinction has hurt the teaching of decoding skills

decoding the alphabet is difficult because it's stupid. FONOGRAFIKS makes the idea of decoding simple, easy, fast

a student can learn decoding in a couple of weeks as soon as they get the idea of decoding, they graduate to adult writing (stupid writing)

(if not, there may be a neurological problem)
